

Student Residence Finder SWOT Analysis

Strengths (Internal):

- **Domain Knowledge:** As current students, the team intuitively understands the exact pain points of finding campus housing.
- **Clear Scope:** The problem is well-defined, making it easier to build a Minimum Viable Product (MVP) without getting distracted.

Weaknesses (Internal):

- **Technical Experience:** The team is new to coding and version control (Git), which means a steeper learning curve.
- **Time Constraints:** Balancing this project with heavy academic workloads will require strict time management.

Opportunities (External):

- **High Demand:** There is a guaranteed user base of students who desperately need this centralized information every semester.
- **Scalability:** If successful, the platform could be expanded to include roommate matching or landlord reviews.

Threats (External):

- **Existing Alternatives:** Students currently use unofficial WhatsApp groups or Facebook pages; getting them to switch to a new platform might take effort.
- **Data Accuracy:** Relying on landlords to provide accurate, up-to-date pricing and availability could be difficult to maintain.
